**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-13, drawn to loop type voltage regulator, classified in class 322, subclass 28.
  - II. Claims 14-19, drawn to voltage system for a thermal engine, classified in class 60, subclass 39.03.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as a heat generation plant since the voltage is regulated for a thermal engine as disclosed in claim 14 and does not necessarily applies to a vehicle engine since thermal generator plants required a regulation signal in real time through a control unit. Moreover, invention II does not require a loop type regulator as invention I does. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper and because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

**Conclusion**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Julio C. Gonzalez whose telephone number is (703) 305-1563. The examiner can normally be reached on M-F (8AM-5PM).
